DETAILED ACTION

Allowable Subject Matter

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance: The amended claims feature a setup of a storage and delivery system including a library, a shared database, an FTP server coupled to the library and database, and a web server coupled to the database. This setup includes populating the library with a number of digital objects, and configuring the database to include web server access codes corresponding to various users and a mapping of which of the users are authorized to FTP download which of the objects in the library. The web server is programmed to perform operations including presenting a web page providing instructions for users seeking to FTP download the digital objects. The users browsing the web page are then authenticated according to their corresponding access codes. A temporary FTP access code is then generated for each already-authenticated user, and is transmitted to the corresponding user. Each authenticated user is then redirected to the FTP server. The FTP server is programmed to re-authenticate the redirected users by requiring the correct submission of the temporary FTP access codes. The digital objects from the library are then made available for FTP download to the users authorized by the mapping, only upon successful re-authentication. Because there exists a mapping of which user is allowed to FTP download which object, and because a temporary FTP access code is generated for each respective user, and because a re-authentication by correct submission of the temporary FTP access code by each user is required before the

objects can be accessed, it is believed that the claimed invention is novel. The examiner was unable to procure prior teachings of such features as claimed, and could not render said features obvious without the user of impermissible hindsight constructions. Furthermore, the remarks by Applicant are persuasive, especially with respect to the discussion that the claimed clients have "direct access to the FTP server or that such a server would re-authenticate users," whereas the cited references do not specifically teach this functionality. It is therefore the examiner's belief that the claimed invention does indeed possess novelty.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
